The **C-Line** automated production system utilizes our **C Frame presses**, known for their convenient frontal access, which is essential for operations requiring direct input and output.

This production line offers versatile loading and unloading solutions, ensuring an optimal configuration for your specific automation needs.

Our presses can be equipped with an integrated conveyor system, simplifying both part handling and scrap management throughout the production process.

Additionally, the C Frame presses feature lateral machined areas on the frame, designed to easily accommodate jigs, accessories, and other attachments, enabling seamless customization to meet your automation requirements.

RBS
ASL

RBS's ASL (Automated Stamping Lines) is aiming to revolutionize the world of automated stamping lines. Our goal is simple yet ambitious: to provide a unified and centralized solution that seamlessly integrates all the necessary machinery that you need to automate your blanking and stamping products.
