Our **Flexi-press** concept integrates the full range of our **C and H frame presses** with inspection booths within automated cells, incorporating cutting-edge **gantry AGV robots**. This innovation delivers a seamless, fully automated production and inspection cycle, elevating efficiency and precision. **AGVs** are a key enabler for the next generation of automation, providing unmatched flexibility and adaptability.

The combination of **AGVs** and **automated storage** solutions makes achieving a high level of automation easier than ever. Features such as **automatic tooling changes** and **continuous cycle monitoring** ensure maximum productivity and exceptional output quality in your **ASL (Automated Stamping Line)** system.

Our innovative **"bay" concept** allows for flexible operation, either in **fully automated** mode with robots or **manual mode** with human operators. This versatility means you can continue using your existing tooling without any slowdown in productivity.

We collaborate with industry-leading hardware and software partners across electronics, electrical systems, hydraulics, pneumatics, and programming, ensuring our solutions remain highly reliable and globally competitive.

RB5's ASL (Automated Stamping Lines) is aiming to revolutionize the world of automated stamping lines. Our goal is simple yet ambitious: to provide a unified and centralized solution that seamlessly integrates all the necessary machinery that you need to automate your blanking and stamping products.
