## H FRAME

Introducing the H-Line Automated Production System – a space- saving solution that maximizes efficiency with our innovative H Frame presses. Designed for compactness, the H-Line seamlessly integrates into your production line, optimizing space and streamlining workflows.

This intelligent design allows for complex, multi-step processes to be carried out in a smaller footprint, reducing both equipment needs and production floor costs. Additionally, the incorporation of articulated robots enhances flexibility, enabling faster, more efficient operations with greater precision. The result? A smarter, more cost-effective production system.

**RBS**  
ASL

RB5's ASL (Automated Stamping Lines) is aiming to revolutionize the world of automated stamping lines. Our goal is simple yet ambitious: to provide a unified and centralized solution that seamlessly integrates all the necessary machinery that you need to automate your blanking and stamping products.
